If these chemicals are used only for wipe cleaning or solvent extractions, risk is lower, nonetheless, peroxide may form when exposed to lights and air.

- When stored as a liquid monomer.
- Although these form peroxides, no explosions involving these monomers have been reported.
- When stored in liquid form, these chemicals form explosive levels of peroxides without concentration. They may also be stored as a gas in gas cylinders. When stored as a gas, these chemicals may auto-polymerize as a result of peroxide accumulation.
- These chemicals easily form peroxides and should probably be considered under part B.
- OSHA-regulated carcinogen
- Extremely reactive and unstable compound.
